The total polishing solution for today's bodyshop

\***DRA™** (Dynamic Response Abrasion) technology – incorporates micro-precision oxides for increased cutting power

PRE-PAINT

**ASP**  
Low VOC, water-based, anti-static panel wipe. Removes greases, oils, silicones, waxes, dirt and other surface contaminants from metal and plastic substrates prior to painting. Reduces static buildup. Suitable for use on solvent sensitive plastics.

MATTING AGENTS

**FLAT MATT**  
One-step, water based abrasive cleaning and prep system for use on all paint finishes. Ideal for difficult areas such as bumpers, door sills and for the blending-in of new paint.

**M'n'M**  
Triple action foaming matting/flattening paste. Abrades, cleans and degreases in one easy-glide action to ensure consistency and uniformity of matted surface. Boosts new paint adhesion. Minimises reappearance of scratches & tramlines through clearcoat.

INSPECTION AND CONTROL

**SPRAY & FINISH**  
Bodyshop safe formula for the cleaning and complete removal of compound residues from paint, glass and plastic surfaces

PAINT PROTECTION

**SPRAY SHIELD**  
Exterior and interior protective coating. Overpaintable! Perfect finish for both wet-look coatings and matt finish lacquer

**OVATION**  
Bodyshop-safe resin wax protection for just compounded paint. Enhances paint gloss, clarity and depth of shine
